NEW PRODUCTION CAPACITY IN GERMANY

Emcol International's manufacturing licensee in Germany, Instamak Stabaussrüstung GmbH, has re-located to new premises on a 3,500 sq. metre site near Lubeck.

With a significant investment in new plant, machinery and computer controlled dosing and mixing processes, Instamak has increased its production capacity for Emcol IRR by 60%. The new site contains increased space for dry storage of the aggregate grades used in Emcol IRR manufacture and an expanded manufacturing area. In combination with the newly installed equipment, greater efficiencies in the manufacturing process have been achieved.

All this represents a considerable success for Instamak's owner Fitz Oberkersch who first began the manufacture of Emcol IRR in 1993 with a production facility of just 100 sq. metres. Over the intervening years, Instamak has grown incrementally and Fitz is now supported by his very able staff, including a recently expanded sales force.
