REPAIRS AT KANDAHAR AIRFIELD

A repair compound for asphalt surfaces developed by Emcol International has been successfully used at Kandahar Airfield, Afghanistan.

Emcol IRR is a cold-laid repair product manufactured under license in over twenty countries around the World. Tarmac Ltd, Emcol's licensee in the UK, markets the product under its RepairMaster brand name.

At Kandahar, RepairMaster was used to conduct Aircraft Operating Surface (AOS) repairs by 10 Fd. Sqn. (Air Support). The RAF was operating six Harrier GR7a aircraft from the airfield and the poor quality asphalt surface was in urgent need of refurbishment in order to maintain operating capability.

RepairMaster was the ideal material for the repairs. Applied straight from the pack into potholes or cracks, RepairMaster requires no pre-mixing, tack coats, heating or overbanding and provides permanent repairs in asphalt and concrete surfaces. What is more, repairs may be carried out in any weather conditions.
